

WIND AND SOUL

RAUXA · Technical rider · Outdoor version

Indicative layout: a hexagon enclosed by jute-covered fencing, with a central pole and warm lighting.

Space and ground

A flat, firm and level surface is required. As a guide, a hexagon with 3 m sides occupies approximately 6 × 5.20 m (23.4 m²); the final dimensions will depend on the agreed fencing panels. Allow additional space for bases, counterweights, public access and circulation; the layout must be agreed with the company.

Fencing and stability

The organiser must provide 6 temporary construction fencing panels, complete with ballasted bases/feet and compatible connecting clamps. Indicative dimensions: 3 m long × 2 m high. Dimensions are flexible and must be agreed with the company, depending on the equipment the organiser already owns or can hire. The jute covering is supplied by the company. Include all counterweights and bracing required for outdoor use with the jute covering fitted. The supplier will determine the ballast required according to site and wind conditions. An access opening must be provided.

Electricity

At least 3 earthed 230 V power outlets near the installation, with suitable protection for outdoor use. Their location, total power requirements and distribution must be coordinated with the company.

Sound

A sound system suitable for the outdoor space, including speakers, playback/connection equipment and cabling. The configuration must be coordinated with the company.

Overnight security

If the installation remains in place for more than one day, the organiser must provide overnight security to protect the artworks and equipment.

Setup access

A Fiat Ducato L2H2 must be able to reach the setup location for loading and unloading during both setup and dismantling. Approximate dimensions: 5.41 m long × 2.05 m wide excluding mirrors × 2.53 m high. Allow sufficient clearance for mirrors and manoeuvring.
